

# R&R...Studio!

RStudio is an integrated development environment (IDE) specifically designed for use with the R programming language. RStudio offers you a single workspace where you can use R for all phases of the data analysis process. Throughout this course, you'll continue to learn more about RStudio and what it can do.

For now, please submit a written response of two or more paragraphs (150-200 words) describing your initial thoughts about RStudio. Reflect on the following questions:

How do you think RStudio can help you in your future role as a data analyst?

What are your favorite features of RStudio?

If you're new to R and RStudio, what features do you think will be the most useful to you as a learner?

Then, visit the [discussion forum](#)  to read what other learners have written, engage with two or more posts, and share your feedback.

Participation is optional
